

(a) The M0-M1-M2 ladder

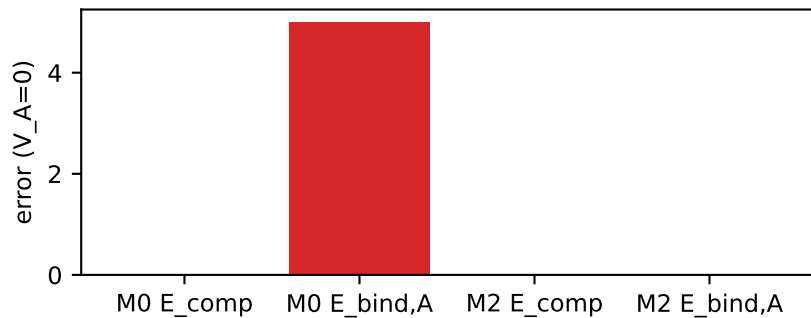

(b) Three-error audit, canonical

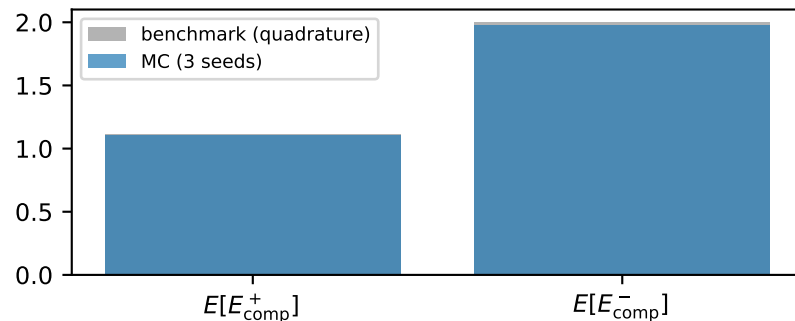

(c) Subtraction antisymmetry
(primary $y(-) = -4$; swaps = $+4$)

(d) AM5 zero-value trap:
joint audit catches the accidental zero

(e) Unconditional error = routing error

(f) Combiner zero-error
 $E_{\text{comp}}|_{\text{both}} = 0.0e0$
